ABSTRACT

The distribution of the midden point information in Bandung is not centralized, so that it becomes a little bit hard for people to get the information. Therefore, it is needed an application that could become media center of middden point information. The existence of the website and android platform is already very widespread in today's society, therefore it is a way to facilitate people to get information about midden point. This application is developed to meet these needs. The development of this application is divided into two platforms, website and android. The website is developed with PHP and MySQL, while the android is developed with Java Programming Language in Android Development Tools (ADT). In the end, by the existence of this application, the distribution of midden point information can be centralized and it will be easier for people to get the information.
