

ABSTRACT

SMAN 4 Wira Bangsa is one of school in Meulaboh that implements boarding school system today, the connection between communication and information delivery system to parents of the students in SMAN 4 Wira Bangsa considered as not good because the way of parents to know the students activities is when the parents collect the students report only, it occurs because the limitation of information obtained by the parents so that it needed an web-based application and SMS Gateway. The application is developed using by PHP language and Database MySQL. Where through this application is expected can giving an easiness to the school in order to inform the information to Students parents quickly. Students parents can acces the information about their children's activities via Web or SMS. Information that received by parents such as students score data, activity information even the data about the school committee cost payment.

Keywords: Web, Student Scores and Committee Dues, SMS Gateway
