

ABSTRACT

With technological advances nowadays, computers and handphones are needed in all aspects, one of them is in health sector. Immunization program in Puskesmas should be able to run effectively and efficiently. So that, it requires some supporting facilities, one of the supporting facilities is an application that can assist in managing data. Management data in Puskesmas Widodaren found some weaknesses, data recording by admin is written in a book. Calculations when making the report also still manually, it possible to calculation error occurred. Beside that, the immunization schedule wasn't constantly. Therefore, writer will create a web based application for the management of immunization data with scheduling feature. With the construction of this application, is expected to help the admin officer's performance in terms of data management and facilitate of making of accurate reports that will be sent to the Department of Health each month and also can inform the immunization schedule.

Keywords: Immunization, based on web.
