

ABSTRACT

In the Garage Music Studio, during this sale and rental of musical instruments is done through direct and indirect. Sale and rental in this way is still less than the maximum, due to several things, such as for example, customers find it difficult to meet directly with the owner of the studio when the owner was not in place if it does not enter into agreements in advance. The research method applied is the Systems Development Life Cycle (SDLC). SDLC is a series of tasks that follow the steps in implementing a computer-based application and testing methods using black box testing. Time preparation is carried out for 3 months carried out from November until January. Therefore, it is made a discussion forum application that is able to overcome these problems at Telkom University.

Keywords: Systems Development Life Cycle, Black Box Testing, Application, Sales and Rental
