

ABSTRACT

De Tuik Restaurant Resort is a business entity engaged in the services and food typical of the area of Sunda. De Tuik Restaurant Resort itself stands on 27 March 2011. Currently De Tuik Restaurant Resort focus provide the best service to all customers. In the process of procurement of raw materials, De Tuik Restaurant Resort has two kinds of supplier, i.e. a supplier of fixed and not fixed. Supplier remains the supplier is supplying the raw materials of food material that is non daily which had previously been tied to contracts of cooperation, while supplier is not fixed is a supplier of raw materials which are daily or daily, or in accordance with a request of the restaurant.

In this final project, research starts with doing the analysis and documentation of the existing business processes that result in the formulation of the problem in the process of purchasing. An analysis of the business process in the application of OpenERP. Analysis of producing gapfit that specifies that the process of purchasing the application uses OpenERP can be applied. The construction of the system is done based on Agile methods.

The application of the system of purchasing using OpenERP is expected to make it easier to manage users in terms of the management of the supplier, the types of raw materials are required as well as the management of the purchase document. Reporting the purchase of raw materials can also be reported in real time.
