ABSTRACT

Indonesian music event application based on mobile web is a means to provide an information that can help customers in the purchase of tickets online without having to queue, thereby saving time and costs. This application is made by using working methods such as Waterfall, CodeIgniter Framework with PHP programming language. The purpose of this application is to assist the consumer in the process of buying tickets, starting from reading the information on the music event to be held, the process of buying tickets to get a ticket in the form of QR Code. And a web of the admin side which helps in data management processes and transactions.

Keywords: Mobile Web Application, Music, Event, QR Code
