

ABSTRACT

National seminar is one of activities that must be followed by the lectures of Telkom University. The information of seminars are usually obtained through mail-list form the PPM. However, there are many lectures, who don't get the seminars information on a regular basis through a mail-list from the PPM. Application of Information the National Seminar based on android and web is an application that is able to provide information on the activities of national seminar for lecturers Telkom University. The method that I use in the making of this application is a waterfall SDLC method, from analist until the testing phase. Web-based application can be used by admin of PPM, internal organizer and lecturer. While applications with android platform is used only for the lecturer. This application uses the MySQL database and have a notification feature of the important dates in the activities of the national seminar.

Keywords : application, national seminar, website, android.
