

ABSTRACT

In the process of organizing academic activities required for a speed and accuracy in data processing. This is necessary in order to improve the quality of student services for students who are the top priority learning mentoring x-target Bandung. Therefore, we need a system that can process at the academic administration learning mentoring X-target Bandung. which include scheduling tutoring in the classroom, recording the realization of learning and student data processing try-out. The main purpose of this application is to produce the web-based academic administration application more integrated in order to support the academic performance of the manager or as a reference for the institutions in the improvement of performance that has not been optimized so as to improve services to students students. This application was made using waterfall model, Codeigniter framework with the programming language PHP and uses a MySQL database. The results from this application can be used as a response to the difficulties often faced by the manager of academic and student learners so that data management and presentation of academic information could be easier.
