

ABSTRACT

Health facilities is a place used to execute health efforts. Government of Bandung city give health services to the people especially those who lived in Bandung. In everyday most of people dont know nearest health facility when they ill, disease specialists and hospital information. So they dont get the right information to health facilities that they need. Therefore, people in bandung need an aplication .Its "search application health facilities in the city of Bandung with geolocation using GPS technology based on Android application."

Now days technology can facilitate the people in give information that is in need such as the GPS and geolocation which can detect the presence of us and can provide the information we are going so that people get the information according to their needs and arrive at a hospital or other health facilities appropriately.
