ABSTRACT

Computer System Study Program is a new study program in IT Telkom. These day computer system study program doesn't have a computerized system for thesis's and thesis scheduling yet, so this thesis intend to create a website-based information systems for thesis and thesis scheduling. Within this system involved a process of the components of final project, such as, lecturers, students, and administrators.

This system includes several information about Thesis, such as, scheduling for thesis examination and circulation the guidance between lecturers and students.

Based on *alpha* and *beta* examination results, this information system functionally well-build and has 70,3% percentage value for *beta* examination result. With this application Computer Systems IT Telkom students are easier to find a reference in the title of Thesis and communication between the supervisor and students become more effective so that the Thesis can be completed effectively and efficiently.

Keywords: information system, examination scheduling, thesis, students, lectures.
