

ABSTRACT

in our daily lives there must be a lot of event or some activities occur to our selves or to every peoples around us, and sometimes we as a social creature want to share our event or activities to our friends, family and every people that conected to us. Now the problem that arises is how to distribute information or news to someone else? For that reason we need a tool that can beused to distribute news or information quickly and accurately.

Application must be build in mobile device so the news or information can be accessed anywhere by anyone else, the application also need a picture, to make sure that the news or information is realy happened or exist, we use a geotagging technic to get the location information of the news that we posted, so the other people can see the location of the news .

In this final project discusses about management of news, especially news or events that occur around the IT TELKOM campus, how the news can be categorized, selected and presented to the user or newsreader that in general are students.

Key words: android, apps, smartphone, geotagging, information, news
