

ABSTRACT

Dividend policy is set by the company's decision was primarily to determine the profits to be distributed as dividends. This study was conducted to examine the effect of the financial performance of the company through profitability, Company Size, Company Growth and Debt Policy on Dividend Policy in the manufacturing sub-sectors of automotive and components listed in Indonesia Stock Exchange period 2010 to 2014. This study used a sample of 12 automotive companies and components listed in BEI. Analysis of the data used in this research is regression analysis using panel data, test F-statistic to test the simultaneous regression coefficients, and t-statistic to test the partial regression coefficient. Results of testing the model used in this research is the Chow test and test Hausmann with the results obtained are random effects models. The statistical test used in this study is to test the F-statistics and t-test statistics. The results of this study found that simultaneous Profitability, Company Size, Company Growth and Debt Policy has no significant effect on Dividend Policy. In partial Profitability, Company Size, Company Growth and Debt Policy has no significant effect on Dividend.

Policy. Keywords: Profitability, Company Size, Growth Company, Debt Policy, Dividend Policy
