

ABSTRACT

Daycare and Preschool is a child care institution can replace the role of parents as long as they are at work or not at home. The Daycare and Preschool children can learn independently and socialize with their environment. Many schools are using the website to convey information about the school and children's activities while at school to parents. Therefore, CMS Daycare and Preschool Teacher module applications need to be made which can facilitate teachers in the management of daily reports, portfolios, activities and employee performance evaluation while in the Daycare and Preschool. This application uses the concept of a Content Management System (CMS). Content Management System (CMS) is an application that can be used to transform, sort, manage various types of content or digital information either in the form of text, images, sound, and video easily quickly and neatly on a system that runs on the website in accordance with the wishes of the people who will make the website application. CMS Daycare and Preschool application using Yii Framework and MySQL database.
