

ABSTRACT

Clair Brothers Indonesia or can be abbreviated CBI is a company engaged in the rental of sound system.

Existing activities in the CBI office as recording of goods in the warehouse, the recording of damaged goods, the goods borrowing and lending scheduling stuff is still done manually.

Clair Brothers Indonesia requires a web-based information system for recording and data storage. The information system created a web-shaped information system using pure PHP and MySQL as the database. As for the development process that is using SDLC with the waterfall model.

Keywords: PHP, MySQL.
