

ABSTRACT

Thalassemia is one of the chronic diseases requiring special care. Thalassaemia is a genetic disease so that this attack toddlers and children. Thalassaemia is a blood disorder that causes Diseases of blood cells (hemoglobin) Red quickly disintegrates so that the age of the blood cells become shorter and the body of a shortage of blood. There are three treatment most often used by doctors. All three include blood transfusions, iron chelation therapy, spleen and folic acid. During her period of treatment, sufferers of thalassaemia are often accompanied by parents and the most common is the mother. In this study, researchers are interested in researching on the definition of the mother against the disease thalassaemia, and how Mother addressing disease Thalassemia suffered by his son based on intrapersonal communications. The type of research used a qualitative approach is phenomenological. The research results showed that thalassaemia is trials/test from God. How against his son suffering from thalassaemia is based in a positive and negative.

Keywords: Thalassemia, a genetic disease, chronic disease, phenomenology
