

ABSTRACT

Islamic banks offer funding to small and medium enterprises. It helps decreasing the poverty and improves opulence of the nation. Unfortunately, some businesses cannot reach funding because of lack of knowledge and because there are lack of systems that can provide relevant information for both banks and SMEs. The set of systems provided by this Final project such as: crowdfunding system, reporting system, micro monitoring system, and Islamic banking web application help SMEs and financial institutions get a connection and collaborate effectively. This research is about a decision supporting system which has purpose to help Islamic banks to better understand which SME projects are worth funding and make funding decisions based on given information.

Keywords: Islamic Banking, Decision Support, SMEs
