

ABSTRAK

Medika 24 clinic come for serving people health for 24 hours, with professional and maximal service. Medika 24 clinic is in Bandung area in Rancaekek region. The important aspect from formation serving is optimize medicine management, there is planning medicine still available, serving sell the medicine and transfer medicine to people. Medika 24 clinic supply various of medicine. Inconsistency data which often happened from selling application because incoming medicine is not efficient, medicine orders did by cashier, then the manager need more time for getting the sales report, because there is no application which can integrated sales report between the manager and cashier. The problem solution which stated before is building POS (point of sales) application based on web which can helping serving incoming medicine with automatic updated in every incoming and expenditure medicine transaction, and costumer can do order the medicine from medika 24 clinic web. POS (point of sales) is electronic equipment used to accumulated and recording every sales transaction. This application design using waterfall method with using framework codeigniter. The result from this research is Point of Sales based on web application with can help user for integrated to manage sales and fast for sales report features.
