

ABSTRACT

Donat Bebek is one of the companies that produce donuts. In 2012, this business was previously named Donat Madu. In 2013 changed its name to Donat Bebek. Donat Bebek able to sell as many as 400 donuts per day. The donuts are not sold will be given to an orphanage. The backgrounds of this application is Donat Bebek do not have a provision in determining the discount. Sales transactions recorded in the book, so that at any time want to check the report must look at all the data in the book, causing duplicate data, and if the book is lost then the transaction data go missing. Determining the cost of shipping is not computerized. In order to manage the sale of Donat Bebek donuts 400 pieces per day and manages the discount, it takes an application. The purpose of making this application is to produce a list of stocks per flavor donuts, generate a list of cash receipts, generate a list of member, determining and calculating the provision of discount sales, manage the delivery order, create journals, ledger, and statements of income. This application using the prototype method as a method of execution, using PHP as programming language, and MySQL as the database. This application is able to handle the management of master data, displaying the card stock inventory, generate cash register receipts, displays a list of members, determining the provision of discounts, manage the delivery order, create journals, ledgers, and the income statement.
