

ABSTRACT

The development of technology that is very rapidly in various aspects of the activity make every company or institution requires a computerized system to facilitate their activities. But not a few still apply the system. Cooperative "Baitul Muttaqin" is cooperative working in the field of savings, investment, sales and services. In the case of capital management which comes from members and external party donations, this cooperative recorded manually using the book and inputted the one to excel at the end of the period to determine the remaining distribution of surplus. This is the cause of the error logging. This web-based applications can be accessed anywhere and anytime is expected to be able to become a tool to make it easier for the recording of the transaction and reporting on the end of the year. The development of applications using PHP programming language and MySQL as Data Base Management System is applying System Development Life Cycle (SDLC) sequentially linier method in step resolution. The purpose of this application is the creation of the report Business Results that will be the basis of the division of distribution of surplus. The things that related with it will also be dealt with by this application among other capital resources management cooperatives from members and donations, defining the value of distribution of surplus members namely discounted rates members as well as the repository of the members. The recording of financial transactions in this application apply the method cash basis.
