ABSTRACT

Accreditation standards is a benchmark used to establish the feasibility and quality of the college or course of study. In a standard diploma accreditation includes standards of commitment to the effectiveness of the education program, which is packaged in a standard 7. Lack of tools for monitoring the attainment of accreditation in a course of study would be prohibitive for program managers in predicting the achievement of accreditation of study, but could be the supporting data is already available. In the current study, the standards which became a standard research only on 2 and 3 with contributors: students, CDC (Career Development Center), alumni, the graduates, and faculty. This application uses XAMPP (Apache, PHP, MySQL) as a stand-alone server (localhost). This application that based on web is very helpful for head of study program to monitor the value of accreditation facilitate kind ofborang calculate, survey and calculation of actual data. The value of borang is from calculation the weight of grain multiplied by value. The calculation of actual data include the evaluation of graduates, student selection, the participation of alumni and tracer study.
