

ABSTRACT

Safety and hygiene part is the part that manages the entire unit safety and hygiene are in a school environment Ar-Rafi. The section is a security guard and Messengers. The task of security is the security of the school, day or night in order to create a conducive in the school environment. And the duty of the messenger is to maintain, care and hygiene condition of the school, both in the classroom / office, lobby, corridors, and school grounds. In carrying parts management system safety and hygiene, in the School of Ar-Rafi is using its listing on the book, which consists of presence, the division of tasks, activities of cleanliness, hygiene kits submission, and daily security guard consists of recording visits and events. The book is owned by each section. With the system running this problems such as loss of data visits / events for the book be used lost or tucked, the submitted data items double, and the report does not match the original data for the loss of the notebook, the built designing Web Based Management Security Section & Hygiene Education Ar-Rafi. This application is used by the Head of Administration, security, and messenger. This application is expected to help the Administration Head for monitoring the performance of guard / messenger and make a report. storage of structured data and to minimize the loss of records / archives. So that the school can determine the policies, decisions, and information relating to safety and hygiene section School of Ar-Rafi. This application is made using working methods prototype, CodeIgniter framework with php programming language. MySQL is used as the database server and black box testing for application testing.
