ABSTRACT

Grab Security: Security Booking App. This was implemented to help people especially the owner of the company in choosing a security guard to secure the company as well as being an application to market the company PT. Gamma mercury Multidimensional Security (STARGUARD) as a provider of security services or security. Grab Security: Security Booking App. made in the base Android with Android Studio and MySQL as the database for the client or customer (the prospective service users) that contains the start of the registration account, the rental process, help, and about the company. Grab Security: Security Booking App. made to solve the problem in the case of reservations that were in office before that by sending e-mail in advance and customers can not choose a security guard who will work in the company, then the Grab Security allows users to book rental services security customers can choose their own security guard will work, and will lease the data entered into the database faster then processed by admin program for further confirmation process is to contact the customer by telephone. As a result, customers become more comfortable and easier in choosing security as well as save time when customers are busy in work.

Keywords: Security, Booking, Interface, Android.
