

Abstract

In the current era of globalization is increasingly rapid technological developments. It causes began to decrease love for the homeland. Though the country has many cultural treasures that should be preserved in every region in Indonesia. For example, there is a monument in Bandung Bandung Lautan Api established for the purpose of reviewing the history of the events Bandung Lautan Api. These events included a form of defense of the people against the Dutch colonists at the time. And many more examples in the history of Bandung, which is forgotten by the surrounding community. For it will be made an application with the title Gemeente Bandoeng which aims to reintroduce historical or important events that occurred in Indonesia, especially in Bandung.

Gemeente Bandoeng is an application built to regrow soul or sense of nationalism to younger generations. By using this application users can know better the history of the city that has been rarely studied and desirable. This application requires a user to learn directly about the history of the city of Bandung, by collecting some guidelines that must be found by the user by using the Augmented Reality camera and geolocation. If the user is found, the end user is required to complete the story of the previous data is lost. In this section a user can learn and understand more about the history of the city of Bandung. Gemeente Bandoeng has a user friendly interface for using menus and icons that are already widely used in general.

Keywords: applications, augmented reality, geolocation
