ABSTRACT

Sofyan inn specia hotel is one of the service company which is located in Jalan Buah Batu Nomor 31 Kelurahan Burangrang Kecamatan Lengkong Bandung 40116. This hotel has many income for hotel service, such as : room service, restaurant, and laundry. Besides that, it also has many rental income such as : car, meeting room, restaurant and mini bar. Until nowadays, the management of Sofyan Inn Special Hotel is not entirely controlled in automatic yet, only hotel room service has already use an application but it didnt directly integrated in the forming of profit and loss report and the other incomes were not integrated yet. So that, the data record does in the archives and then make it to the profit and loss report. This last project is proposed to make easy the hotel for helping the service management and the making of profit loss report to be an automatic program. The application to make this program run well is PHP web based applications and using mySQP as the database. While the development method is using SOLC with waterfall model. These applications has journals with the record of incomes and the charge that company needs to the process of counting profit and loss report, so that can produce data and profit loss report accurately while making the report besides that the data also stored more safely.
