

ABSTRACT

The utilization of the internet are now entering different aspects of the field of endeavor. With the technology of the internet all the information can be retrieved quickly and easily. Nowadays many companies are already making use of the internet to be able to support the company's performance. But there are still many companies that are not using technology to support their activities. One of them is a car repair shop Motosport 5 Pandavas which system work is still done manually. This was the final Project proposals made underlying entitled: "design and implementation of car service reservation system-based website".

Problems found in car repair shop Motosport 5 Pandava is the system still work done manually like car service reservation that still require the customer to come directly to the repair shop, so customers cannot know if the car repair shop is full and can not serve customers. The existence of these problems, at the end of the Project this time was made a car reservation system services application based website on car repair shop Motosport 5 Pandava.

At the end of the Project generates the application servicing the car reservation system online. This application was created to facilitate information systems 5 PandavaMotosport especially when customers make a reservation car service, so customers don't have to come directly to make a reservation if you want to fix the vehicle and garage parties provide information to the customer automatically when the vehicle is already fixed.
