

ABSTRACT

Baby's growth process is the most important thing to monitor by a parent, especially for moms. one of the health facility that can be used by the parents to know their baby's growth is Kartu Menuju Sehat(KMS), it can be obtained in every health services. Regarding work-related time spent by parents, it often affect the parents in having lack of time to monitor their babies and check them in the health service center. Besides that, the registration and the monthly report from this KMS is still conducted manually by the health service officer. Web Based Kartu Menuju Sehat Online Recording Application is made to help parents in monitoring their baby's growth and to help the health service's officer in the process of making their registration and monthly report.
