

ABSTRACT

Academic application that can be accessed online is an important tool in any educational program. In this case, SD AR-RAFI' is used as a case study in making this application, because the current managements of academic data in Ar-Rafi' are still experiencing difficulties in processing data. Such as creating exercises, approving exercises, notifying student's written competency test schedule, evaluating teacher's performance and scheduling school's meeting. The purpose of this application is providing ease of delivery exercises, approving exercises, notifying student's written competency test schedule, evaluating teacher's performance and scheduling school's meeting. Method which is used in creating this academic learning activities application in ar-rafi', module of students' written competency test and management of working meeting is prototyping, with CodeIgniter Framework, using PHP programming language and MYSQL database as data storage media.
