

## ABSTRACT

---

*Historical Place is very valuable asset for some regions in the nation making it as one way to preserve the culture of the region. To achieve this, the historical place should be well-known by the society. Currently, there is problem of it which is the publication of historical place is not fully reaches the society because of the lack of the involvement of information technology. Nowadays, website and android application is quite familiar and spread widely in the society, therefore it should be maximized to publicize the historical places. This application is developed to meet these needs. This application is divided into two types of application, the website and android. The website is developed by PHP, MySQL, and Codeigniter Framework, while the android is developed by Java Programming Language on Android Developer Tools (ADT). This application is tested using the black box testing method to ensure each function runs as needed. By the development of this application, the publication of historical place information can be maximized and it will be easier for people to get information.*
