

ABSTRACT

At the present time, public interest in guitar music instruments is increasing, as is evident with the proliferation of music schools that opened especially guitar music classes, both formal and non-formal. "Home Tone Music" is one of the music lessons that teach a variety of musical instruments, located in the city of Bandung. Consisting of some teachers who are experienced in their respective fields, they introduce and teach musical instruments, especially the guitar at the young protege, either still beginners and advanced. To be able to play the guitar, the students should learn the basic techniques of how to play the guitar first, in order to support the membership of the pupil. However, they generally find it difficult to learn the basic techniques on the guitar. They have not yet understood and require exposure through a simulation that can visually explain the basic techniques on the guitar. Based on test results, that some students find it difficult to learn the basic techniques on the guitar.

Therefore, the authors raised the subject matter of an application of learning media that is " MULTIMEDIA BASED APPLICATION TO LEARN PLAYING GUITAR FOR BEGINNER" to help students and simplify the teacher in the learning process.

Keywords: Application, Multimedia, Learning, Learning Guitar, Flash.
