

ABSTRACT

Indonesia has the potential of natural resources priceless of charm natural beauty that extends across the whole range of islands this country .Beauty the charm , hills , the sea and coastal can be attraction , especially in the context of fulfilling human need indefinite , one of them of the needs to do relaxation and recreation . To accommodate the recreational activities , resorts becomes one of the choices accommodation facilities . Based on the number of the geographical size , Indonesia including countries which have tropical climates damp with the level of temperature high between 23-24 °C and the degree of moisture of high that was between 40-90 % .Cannot be denied that the phenomenon of climate , geographer and the condition of the surrounding environment is as the physical aspects who became big challenge to form a design eco-resort . Many development resorts in the region around especially Garut district of course not everyone watched ecological side , by doing approach ecology in design in principle see natural factors , expected that tourists who are staying can feel calm , comfort , and enjoy facilities provided as means to the needs of rest and recreation also can more concern the environment around which to minimize the use of energy and material environmentally friendly.
