

ABSTRACT

In this globalization era, classic vehicles in Indonesia diminishing population and its popularity is due to the development of the automotive industry is advancing rapidly, and the increasing number of innovations and new technologies applied to the automotive vehicle in the present era. Classic Vehicle History general public regarded as antiquarian boring and uninteresting to be studied and observed actual classic vehicles also contributed to the development of the automotive industry in the world. Besides the classic vehicle also has a high historical value that deserves to be maintained and preserved so that people in the present era and the era of the future can determine the development of the automotive industry in the world. One museum in Indonesia that help preserve the classic vehicles are Sentul Automotive Museum. But at this moment the public is less interested in a trip to the museum is caused by the arrangement of the display and a few other things. Seeing these conditions, in this thesis Re-design interior automotive museum in the sentul area been to promote and re-establish this museum so that more people want to come and study the development of automotive in this museum.
