ABSTRACT

In the process of internship, there's a lot of internship student doesn't fit with the company needs. the absence of specialized media that connects the company with the students, making the vacancy that published by the company is not through the overall information to students. Many of the students who do not know where job vacancy are published. This situation makes the company difficult to obtain human resources actually needed by the company.

The condition was resolved by building an application that is able to accommodate between the companies and students in informing the job practices. The method used in this research is iterative incremental.The phases are carried out in the studyare, inception, elaboration, construction and transition. This Applications will be built with the framework laravel.

The results of this application research is an internship website management. This application is built to allow companies to inform job practices so that companies can get the student that suits the company's needs.

Keywords: internship, website, iterative incremental, laravel
