ABSTRAK

Electric power resource has turned into the main needed for the human on this present day, with it still belongs, all work could become easier and helped. We can't lie that all people among the world and Indonesia especially use electric resource everyday and for 24 hours, the uses and the demands of this power resource can be included to a high demand. Indonesia also named as a wasting electrical power resource country in ASEAN but it is not developed and spreaded well to the all country. There is still 43 % houses of Indonesia which is not streamd by the electric power. Flugarity on this power resource is the first thing that we can do to help our brother who doesn't spreaded by electricity powers so they can consume power as we do everyday, but untill this day, the mind set of people of purpose about saving the power its only to reduce the cost. The demands of education about saving power to a childern is so crucial and needed. With a right media and content, education about saving power could make a changes for this country on several years later.
