

ABSTRACT

Preschool and kindergarten are part of an early age childhood education aged 2 – 6 years which intend to develop children's personality. The process of learning from an earlier age can make child not only be ready to enter the level of education further, but also be ready to obtain physical stimuli, motoric, intellectual, emotion, and social in accordance with age. Currently there are many learning methods that have been applied to each school to support the development of the children, one of them is called Montessori method. Montessori method is a method which able to stimulate children to be discipline, independent, smart, and responsible in daily life. Bandung Montessori School is kind of school which applies the Montessori method. But along with several programs that provided at this school, it turns out that their school programs are not being supported by facilities as its expected. They had low supporting facilities such as classrooms and another Montessori equipments so the activities still have not done well. Through the principles of a Montessori education such are freedom, beauty, regularity, natural, and the use of equipments that are applied into the design is expected to make Bandung Montessori School would be a school which has complete facilities according to the needs of child. It will make them grow up by their own creativity, not having lost excitement in their childhood, provides an opportunity to explore the environment through facilities and scenes of fun thus aiding the development physical and motoric of a child.
