ABSTRACT

Bandung is one of the city that have a lot of heritage building in Indonesia, that have historical value, culture value, art value and classified in cultural heritage that must be protected. Unfortunately the number of that buildings is decreased and unmaintained. In other way this historical buildings become an interesting historical tour for local or foreign tourist to visit, but on this day there's no local guide or guide book that available and reachable in that place.

Moreover, the information of historical building that provide by the government is still less. Remembering the smartphone users and needs in Indonesia is increased in every year, so the writer want to design an android prototype virtual guide application of historical building in Bandung, which this application will contain the informations about historical building that will guide the user to enjoy historical tour in Bandung. The writer purposes of designing this final task is to add society and tourists knowledge that expect to increase peoples concern about historical buildings that will impact on tourists attraction on historical tourism in Bandung.
