

## **ABSTRACT**

---

*Application Of Filling Management Telkom University Students In Unit Affairs Of Students And Alumni Partnership Based On Android is an application that manages each submission of proposals and coordinate all the activities of the students. The problems that occurred in this area, namely the management of activities that have not been managed well, information status of proposals that must continue to be controlled by the complainant, and the presentation of the report presented waiting for requests from the manager. This application is made by the working methods SDLC Waterfall using java programming, and database MySQL and because these applications consists of web-based applications and android then this application makes an API webservice that allows Android applications can access data from the web page and the application is using the testing of blackbox testing to check the overall function of any application functionality. From the results of tests performed, the functionality of the system work as expected, both in the management of the filing of the activities and the provision of information to students.*
