

Abstract

Ease of access to different source of information regarding particular topics often cause confusion. In search of information regarding particular topics, we could find many different source of information. It will take subsequent amount of time to read all of the discovered information source to a particular topic. The implementation of Context Sensitive Multi-document Summarizer is proven to decrease the time required to summarize large set of document and greatly reduce the likelihood of information redundancy in the final summary.

Kata Kunci : peringkasan, informasi, banyak dokumen, *Context Sensitive*.
