

ABSTRACT

Souther industries is one of a manufacture company which located in Srandakan street KM 01, Jodog, Gilangharjo, Pandak, Bantul, Daerah Istimewa Yogyakarta. Souther industries main business is in t shirt convection, shirt, jacket and hat. Nowadays, Souther Industries has 35 employees which divided into 8 department. Those are: design division, screen printing division, packing division, purchasing division, color separations (CMYK separation) division, stream cleaning division and sewing division. The obstacles that commonly appear is the miss-calculation in wage payment, since there are so many differentitation in the amount of the basic salary for each division. To avoid this obstacle keep appear it needs an application that can count in details such as basic salary, over time salary, health allowance, holiday allowance, fuel allowance, bonus and etc. The application is built using PHP language programme and MySQL database. This application is built using waterfall metode. This application can count the basic salary, overtime salary, health allowance, holiday allowance, fuel allowance, showing the jounal and the big book and also the report and the salary receipt. This application is made to minimize some missed on salary distribution and to avoid any risk of losing database that is caused by the broken tools and losing the original file. The goals of using this application is to help the company routines activity in calculating the salary of their employees.

Key words: application, wages, convection, presence, allowance, overtime.
