

ABSTRACT

PT. Logika Tunggal is a company engaged in the service. constraints in the company is in the record of wages foreman, Plumbers and Courier used manually so doing perekapan frequent loss of logging for reporting cash out for a week. Recording of the required infrastructure are still using manual recording, and reporting to still use manual. From the above issues companies need applications that can handle management of payroll wages, recording infrastruk, purchase of building materials, and reporting. In analyzing the data collection system for development by means of interviews, the writing program code using the Codelgniter (CI) and MySQL. This application can handle the management of wages each week, recording infrastructure, reporting importation of goods, and cash receipts report incoming and outgoing cash.

Keywords: PT. Logika Tunggal, Codelgniter (CI), MySQL, Report Cash In and Cash Out.
