

ABSTRACT

At the high school students today are often are delinquency that is skipping school and parents only know their children go to school, not knowing the problem presence, value assignments and test scores and student behavior in school. While the schools mainly principals still do not know information about the presence of students in high school, the value assignments, test scores and student behavior in school. The system built a WEB and SMS based system that handles the provision of information to the school and parents regarding student academic data include presence, value assignments, test scores and behavior of students at SMA Negeri 1 Dayeuhkolot Bandung. The monitoring system is intended for parents is a system that can handle student attendance by providing information to parents on a daily basis in the form of SMS. From the results of tests performed, the functionality of the system can run well. All the system is running as expected, either in the system of SMS and WEB system.
