ABSTRACT

AntaraFoto News Agency is an agency that provides information on news and photos. Institutions news agency AntaraFoto has had an application that can display photographs from the national and international but the information system can not handle the entire existing business processes in AntaraFoto ie buying or selling photographs, confirmation of payment, recording and reporting of transactions of sale and purchase photos, process are still done by manually so as not well documented and neatly. Based on these problems then comes an idea to build an application that can help AntaraFoto to make the process of buying and selling photographs, confirmation of payment, recording and reporting process of buying and selling photographs. Method of designing applications using PHP, HTML, CSS and MySQL database use, to use black box testing method that tests that focus on software functionality and outcomes in terms of the desired design.
