ABSTRACT

CV. Sahara is one company that is engaged in the production of manufacture of fats. Fat production in the CV.Shakara yet have an application that can help determine the calculation of the cost of production of fat, so resulting in constraints on production cost price calculation. On this final project, I made the production cost price calculation application with a full costing method CV. Shakara. The this final project uses software development method of waterfall and it is implemented by PHP and MySQL database program. In this application there is a form the raw materials, form the labor costs , and form the overhead costs of the manufacturer. The application is also able to produce journals data, general ledger, income statements and the cost of goods sold as a result of output and save all the data transactions to the database. This application which was provided for CV. Shakara to provide facilities no the user systems, in particular the thewarehouse, the production and accounting part in it's production and manufacturing report.

The Keywords: Full costing, Cost of good manufactured, MySQL and CV.Shakara.
