

ABSTRACT

CV. Fajar as one of the companies engaged in contractors and procurement of goods business do credit sales with partners and raises receivable for company. Credit sales are sales made when payment was received some time later after the goods are shipped to the customer. The Company only received part of the payment and the overmeasure of the payment is paid installments by customer accordance with the conditions set. At this time, the implementation at CV. Fajar still manually and it caused a lot of loss of data, like receivables data and the others data like bid request for project letters, of price letters, work order letters, and materials data. Therefore, appeared an idea to build a web based application to execute a few of business process are computerized. This application built use PHP language. This application can also do other activities like give information about aging schedule, and create journal and general ledger.

Keywords: Credit Sales, Receivable, Aging Schedule, Website, PHP
