ABSTRACT

Currently, there are many companies engaged in manufacturing. Production budget management is required in the manufacturing companies to control spending and make the preparation of the production to be better than the previous period. In managing the production budget, often faced problems of how to keep the budget in accordance with actual production to the production process. That requires the Web Based Application of Production Budget and Realization Listing of Production Budget which is used to manage the budget calculation of production and the realization of the production budget. In this study, application development using the waterfall method with the PHP programming language, MySQL database and use CSS3 and Jquery display. At the end of this application can manage the process of the production budget, direct material budget, direct labor budget, factory overhead expense budget to be able to generate reports budget realization, graphic realization of the budget with accounting records such as journals and ledgers.
