ABSTRACT

PB Madinah Sekam is a company budge in manufacturing in the manufacture of animal feed called Sekam. The company is located in region of Cirebon. Materials used are purchased from the bran of rice mills. In this company, raw material inventory recording process and recording process of production is still recorded manually in the stock book and the book stocks of raw materials production. Overhead Costs recording process is still mixed up with a book deal also noted the sale of goods, materials purchasing, accounts payable, and accounts receivable.These problems make the recording process becomes more difficult and uses a lot of paper. Then the lack of detailed record keeping production costs led to the reporting process on the PB Madinah sekam becomes inaccurate.Therefore, to help the process of recording and counting on the PB Madinah sekam made a web application with the name "Application Production and Sales Feed Web-based (Case Study on the PB Madinah Sekam Cirebon)" with the aim to record the raw material inventory, record production , noting the end of finished goods inventory, noting the factory Overhead costs, and the calculation of production costs are computerized. To complete the calculation process in accordance with the accounting rules, then the applications are added calculation of the cost of production, cost of goods sold, journals and ledgers. This application is built using waterfall method, with the PHP programming language and MySQL database as the database.

Keywords: Animal feed, production, sales
