ABSTRACT

Siomay Hade is a company working on siomay production. There is no application to determine the retailed price yet which is crucial for production cost calculation. A good plan n control is needed for production cost. Standard cost is one of the tools to control production cost. Standard cost is set to manage the actual cost; so that it will not over the standard cost.

This application was developed due to the difficulties to determine actual production standard cost. Costing standard method was applied to calculate main production/retailed price, using Software Development Cycle (SDLC) method. PHP with MySQL data base was used for programming. This application can produce common journal data, main book, and retail price report as outputs, and save all transaction data to the basis data.

Key words : Costing standard method, Application, retailed price, PHP, MySQL.
