ABSTRACT

Along with the development of science and technology is increasingly rapidly lead to widespread use of computers, especially in Indonesia, which at the present time is still a developing country. One form of implementation of the information system that is fast, precise and accurate is the information system based websites where teknlogi computers and the Internet play an important role for the wider community. Spread or update information delivery that do use the Internet are online, so that information can be made accessible by anyone, anywhere and anytime as long connected to the Internet.

Educational institutions as a container that serves as a place to make the process of learning, training and development of students, in the era of globalisiasi is expected education can follow the development of science in the field of information technology to support the academic activities that can provide information on the development of students' learning process quickly dat smoothly through internet media. Convenience and comfort in processing and view data is needed in particular to the effectiveness and efficiency of the students, teachers and parents are in contact with the school.

Therefore, academic information system is expected to be a solution for easy access to data that is required as documentation and other essential things in the scope of the Interactive Educational Gemilang Mutafannin in particular, and the whole school in general. With the concept of systems and methods as diverse as the prototype method, descriptive and action, and a system approach is expected to help resolve problems that often occur in data processing schools.

Keywords: System, Information, Method.
