

ABSTRACT

In the capital market a myriad of information that can be retrieved by the investors, both of which are available in the public mauppun the personal information into taking a decision. The most widely used resources through the financial statements. Financial reports used the company as one of the tools to measure the performance of the company. Moreover, it can also be used to find out the changes and developments of each year. For it is need for analysis of the company's financial performance and analysis of financial statements as a clear picture of the condition of a company. This is a basic reference shareholders or prospective shareholders to invest capital.

The purpose of this research is to know the influence of financial performance against the stock price on coal mining companies already listed on the Indonesia stock exchange the period 2011-2015 Economic use Value Adde (EVA).

This research is descriptive research using this type of quantitative research methods. Then to analysis the data used is regression data panel with the t test of hypothesis testing and koefisiensi determination (R²). The object of this research is a coal mining company listed on the Indonesia Stock Exchange (IDX).

Based on the panel data regression test results indicate that the variable EVA (Economic Value Added) does not have an effect on share prices of coal mining companies were listed on the Indonesia stock exchange (idx). This is supported by the results of the t-test shows the value t calculate the table of $t < 0.028769 < 2.02809$ and the results of the determination of the coefficient of 0.23%. From the results of these researchers conclude that partially variable Economic Value Added (EVA) is not a significant effect against the stock price.

Keywords: stock prices, economic value added (eva), financial performance
