In Indonesia, especially in Bandung, the development and problems of autism children each year increased. In Bandung, there are approximately 739 people, or approximately 10% from the number of autism people in Indonesia. For handling the development and problems of the autism children needs treatment facility and school. One of the problems of autism children is that they have a different sensation to the environment. So, good interior design needs to be applied to the treatment facility and school of autism children Spectrum Treatment Education Center is one of the therapy and school for autism children. This foundation has been providing therapeutic and educational services for autism children in accordance with the needs of each autism children. But the atmosphere, therapeutic environment, and the school has not been good. It is due to the incompatibility with the problems of autism children in which about its different sensation (autism children). Formulation of the problem in this design is to create an interior design of potency development center for autism children in Spectrum Treatment Education Center Bandung in accordance with the problems of autism children, with some aspects of health, safety, and their comfort (autism children). So that, the design goal is to create an interior design of potency development center for autism children are in accordance with the problems of autism children, with some aspects of health, safety and comfort. To realize the design goal, the design concept refers to the problems of autism children. Design theme is “Spectrum” which means light which breaks down into several levels of

color like a rainbow. In the phenomenon of autism children, they have problems of different levels. And this case is analogous as Spectrum word that means different levels. So that in creating the interior of potency development center for autism children is designed with the ambience level/ different room level. To form the draft then in the aspect of patterns, shapes, and colors will be made differently. It's to be designed in accordance with the problems of autism children who pay attention to aspects of health, safety, and their comfort (autismchildren).
