ABSTRACT

Integrated book is record data kids activity everyday at school along with record data for parents at home, in integrated book parents be able know kids activity at school like informed improved kids at school, for example kids can following subject from teacher, also known kids behavior at school, however guardian teacher have problem communicated with parents through integrated book. In this case because parents rarely read information written at integrated book, parents more like read at media communication handphone with the result that school and parents made social media group for communicate than read at integrated book, not only that but also sometimes student forgot take integrated book to home and integrated book susceptible broken or lost. In this final project will presented website design integrated book as design base data and design functionality, as the result this design in the future can use for build application integrated book web base that can use as communication media between parents and teacher in online. The method used for design result is metide SDLC with take two step early that necessary analytical and design.

Key words : Integrated book, parents, design, teacher
